

MPC unveils latest control system for small urban Wastewater Treatment Plant projects

Victoria, B.C. Canada – 18 November 2008 – [MPC Consulting](#), Vancouver Island’s leading supplier of electrical control systems is pleased to announce the unveiling of their latest Wastewater Treatment Plant (WWTP) electrical control and SCADA system.

Located in the [Dockside Green](#) development in Victoria BC, MPC was a key member of an expert team of consulting engineers assembled to design and build Victoria’s first closed loop wastewater treatment plant. What makes this development unique is the commitment to achieving LEED® Platinum Certification (Leadership in Energy and Environmental Design). This is the highest level that can be achieved under the [CaGBC LEED® program](#). The incorporation of the WWTP contributed points (Innovative Wastewater Technology) to the LEED® Platinum designation awarded to Synergy, the first phase of residential buildings at Dockside Green, and will contribute equally to future phases.

In association with [Busby Perkins & Will](#), [Morrison Hershfield](#), [Farmer Construction](#), [Stantec](#), [Read Jones Christoffersen](#), [WorleyParsons](#), [Komex](#), RCL Consulting and [Corix](#), MPC was tasked to design and build the controls, instrumentation and SCADA systems (Supervisory Control & Data Acquisition). Work was completed this past summer and the plant is currently in operation mode.

“MPC was honored to be a part of such a distinguished group of companies who had the opportunity to work on a high profile project like the Dockside Green Wastewater Treatment Plant.” says Paul Bulmer, President of MPC. “There were a number of challenges with this project but the end result is a facility that is the envy of the world in terms of next generation environmental sustainability. Indeed this is a project that Victoria and the rest of Canada can be proud of.”

About MPC Consulting

Founded in 1991 and located in Sidney BC, MPC Consulting is a leading provider of electrical engineering and control systems for design and build projects. We provide engineering services for instrumentation, automation, process control, and SCADA. Our Custom Panel Shop is the only CSA (Canada & USA) certified facility on Vancouver Island. Paul Bulmer is the principal of MPC and has 30 years experience in instrumentation and process control design engineering.

About Dockside Green

With the first phase complete and the second phase under construction in the heart of downtown Victoria, British Columbia, Canada, Dockside Green is shaping up to be a community like no other. Developed by Vancity and its partner Windmill West, Dockside Green is transforming 15 acres of harbourfront industrial land into a community of the future, complete with residential, office, retail and commercial space.
